EXAMINER'S AMENDMENT

The application has been amended as follows:

Specification

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The title has been changed as follows:

'Transflective liquid crystal display device that controls disinclination caused by an electric field'.

DETAILED ACTION

Allowable Subject Matter

2. Claim 1 is allowed.
3. The following is an examiner's statement of reasons for allowance:

A search of the prior art did not disclose a transfective liquid crystal device comprising a combination of the structural elements, more specifically:

(a) A twist of angle θ of the liquid crystal layer sandwiched by the pair of substrates is in a range of $\theta \leq 90$ degrees, then an alignment treatment in a direction corresponding to the twist angle is applied onto each of the pair of substances in such a manner that in a state that no voltage is applied, a direction of the long axis of a liquid crystal molecule positioned $(1/4)d$ (where d is a layer thickness of the liquid crystal layer) high from a surface of the one substrate is oriented to a direction that is perpendicular to a direction in which a space between the electrodes adjacent to each other extends.

None of the prior art teaches an alignment treatment in a direction corresponding to a twist angle and the positioning of the long axis of the liquid crystal molecules either perpendicular or parallel, for the specified twist angles, to a surface at a height of $(1/4)d$, when there is no applied voltage.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
